

Animals and plants...they need to survive and to do that 1 thing all living things strive to do they need to adapt to their environment.

⁶ They're are many different adaptations for animal and plants some for protection some to make living easier. ^{1.6} one example of a camouflage adaptation is the fact that a viceroy butterfly has evolved to look exactly like a monarch butterfly which is poisonous to eat they do this to stop from being eaten which is an example of protection and example of camouflage.

Another example of protection to avoid being eaten is a cactus they have spikes that harm other animals if eaten so animals will know to stay away.

In conclusion all these examples show that the way animals adapt is extremely interesting and crucial to their survival.

5/6

3 * and an action

- * Good studies
- * You provided examples of animals/plants that have the adaptations
- * Great use of scientific keywords like

Action: Please respond to anything highlighted pink or blue. You needed one more adaptation and example to score full marks.
